

LED PIXEL STROBE IP 65

EK 10000 STROBE

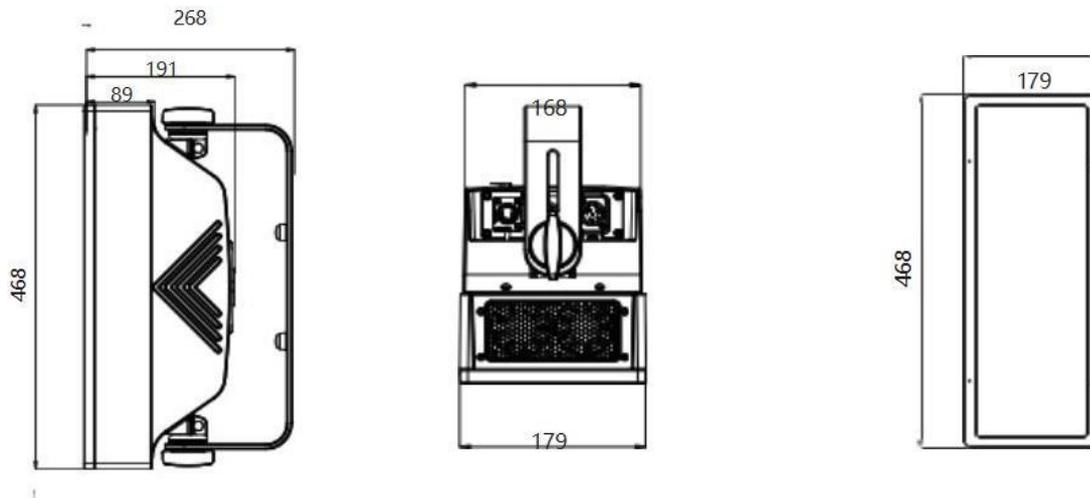

USER MANUAL

- **Safety Warning**

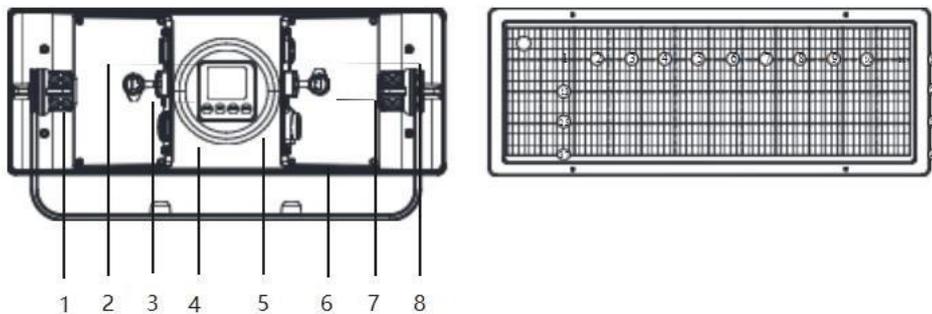

- **The products are packaged in good condition when leaving the factory. Please operate according to the user manual. Machine failures caused by human factors are not covered by the warranty.**
- **The light source in this lamp should be replaced by the manufacturer or its service agent or a similarly qualified person. If the external flexible cable or cord of this lamp is damaged, the cable should be replaced by a qualified person from the manufacturer or its service agent to avoid danger**
- **After receiving the light, please unpack it and check whether there is any damage caused by transportation. If there is any damage, do not use this lamp, and promptly contact the supplier or manufacturer.**
-
- **This product is suitable for indoor and outdoor use, and its protection level is IP65. Lamps should be kept clean to avoid using in humid or dusty environments. It should be maintained every three months.**
-
- **Only qualified professionals can carry out the installation, operation, and maintenance of lamps and ensure that they operate in strict accordance with the procedures described in this instruction.**
-
- **Light should be installed in a well ventilated place with a distance of at least 50cm from the wall, and the ventilation holes should be checked for smoothness. Do not look directly at the light source to avoid damage to the eyes.**
- **Please do not turn on the light for self maintenance.**
- **The parts for electrical connection must be operated by qualified installation personnel.**
- **If the rear cover of the lamp is equipped with a safety buckle or connection hole, for safety reasons, please use a safety rope to penetrate the connection hole for auxiliary lifting.**
- **After 10 minutes of full power operation, the surface temperature of the lamp should be approximately 40 degrees Celsius, and after stable operation, the surface temperature of the lamp should be approximately 70 degrees Celsius.**
- **There are no user serviceable components inside this lamp. Before starting to operate the lamp, please check whether all parts are properly connected and whether the screws are reliable and secure.**
- **If you have any questions or concerns, please contact the supplier or manufacturer in a timely manner and return the product with the original packaging stating the reason for the defect**

Dimensional drawings

Product Introduction

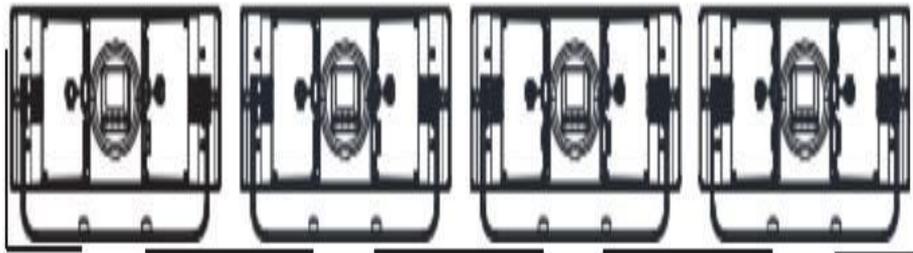

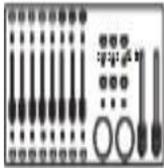

- **The 4-color LED is divided into 6 large blocks, each of which is further divided into small blocks, 1.Handle screw: used when adjusting or fixing the angle of the light**
- **DMX input: 3-core DMX waterproof signal line input**
- **ART-NET input: Connect network input**
- **Power input: waterproof POWER CON power cord Input voltage: 100-240V 50/60HZ**
- **Panel operation keys: mode, UP, Down, Enter; TFT 220 X 176 touch display**
- **Power output: waterproof POWER CON power connection line Output voltage: 100-240V 50/60HZ**
- **ART-NET output: Connect network output**
- **DMX output: 3-core DMX waterproof signal line output**

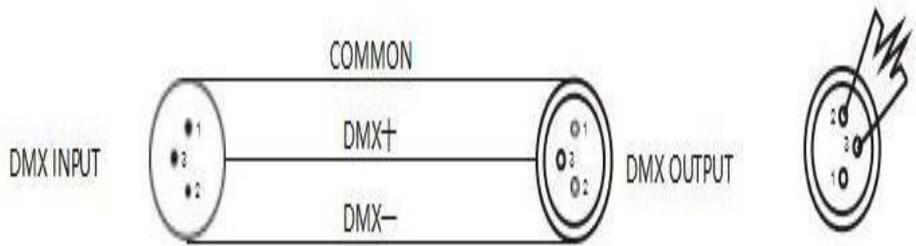

Description of display panel key

Function	Description	Function Description	function
MOD E KEY	Menu selection	Enter menu selection function	Menu Actions
UP KEY	UP	Go to previous option	Change parameter increase
DOWN KEY	DOWN	Go to the next option	Change parameter reduction
ENTER KEY	ENTER	Confirm the selected function	Save Last Parameters

DMX Connection

DMX Connection Instructions

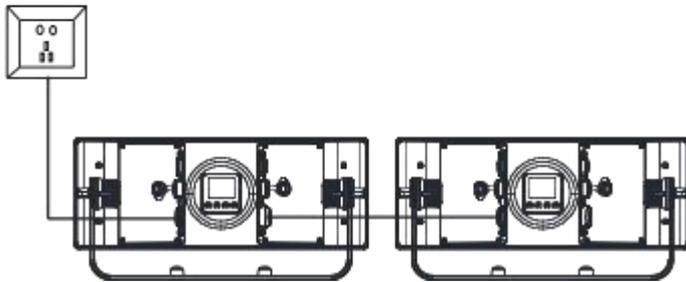

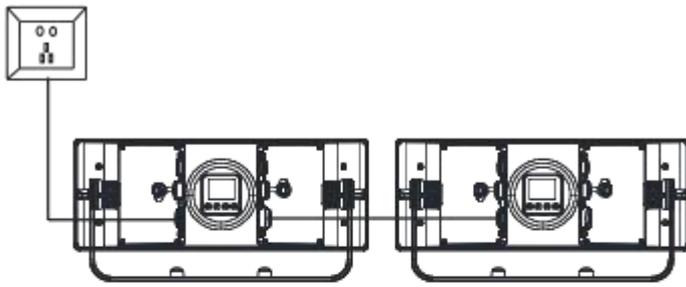

- To reduce signal errors and avoid signal attenuation and interference during transmission, a 120 ohm 1/4W resistor can be added between the 2 and 3 cores of the DMX output terminal of the last machine.
- Connect the lamp with an XLR signal line, with one end connected to the output port of the light and the other end connected to the input port of the next lamp. The signal line Can only be used in series, not in parallel. Because the DMX512 signal transmission speed is very fast, when the signal line is damaged, the welding joint is not secure Poorcontact, etc. can affect signal transmission and cause the system to shut down.
- When a unit's machine power supply is disconnected, the DMX output and input connections are bypassed to maintain the DMX line connection
- Each lamp must have an address code that can receive messages from the console.
- The terminals of the DMX512 system need to be equipped with a terminator to reduce signal transmission errors.

Relationship between address codes and channels in DMX 512

Channel	Address	Address of the first light	Address of the second light	Address of the third light
ADVANCED 1	001 -015	001	016	031

(Refer to the above figure) The number of lights added after the fourth set; The address code is deduced sequentially based on the channel .

Power connection instructions

Power In

Power Out

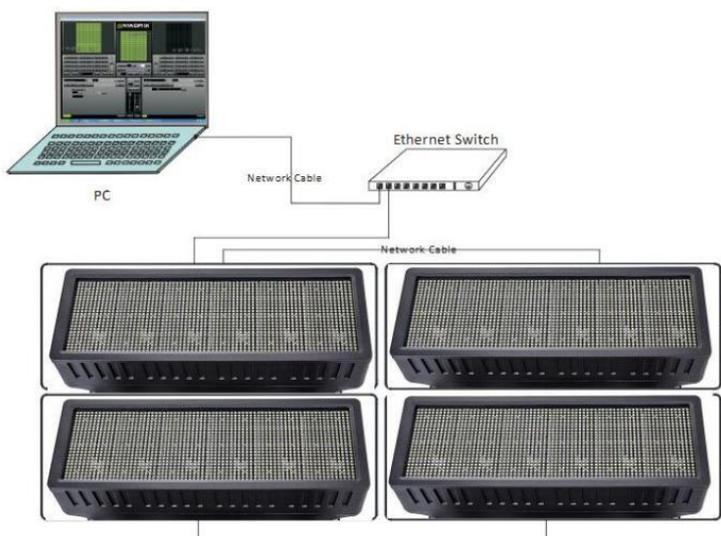

This product uses Powercon in/out
Connect the power cord hand in hand

Note: Due to power reasons, a 1.5 square meter power cord can carry up to 2 sets (230V)

Do not connect too many lights to a single power cord, or overload it.
Do not use a power cord with damaged insulation and do not lap the power cord over other wires.
Please unplug the power cord when the lamp is not in use or clean.
Do not vigorously plug or drag the power cord directly.

Network Connection

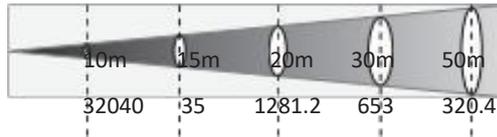

Technical parameter table

Menu Description

- **CONNECT connection**
- **DMX Address (setting of address code)**
- **DMX mode: basic channel mode, pixel channel mode, extended channel mode**
- **Ethernet (network protocol setting):**
- **Protocol: Two network protocol control modes can be selected: (DMX and Ant net)**
- **Subnet**
- **Universe: 000-015 space settings can be set**
- **Start Channel: Setting the start address 001-512 .**
- **IP address: IP address: 2/10. * * . * . * * * * ***
- **Ethernet To DMX Network Connection DMX**

SETUP settings

(1) Temperature unit : F:Fahrenheit degree C:Celsius degree(2) Screen : (Setting of screen parameters)

- **Back Light** : Setting of screen backlight (can be set to stay on, or to turn off the screen in 10/20/30 seconds without operating the menu)
- **Flip Display** : Forward and reverse direction of screen menu subtitles
- **Key Lock** : Screen lock: When the screen appears and needs to be unlocked, please press: UPDOWN to repeat twice, and then press Enter to unlock (Fixture (Light p function setting)
 - 1.white balance : White balance adjustment for uneven color mixing. This menu allows you to adjust the desired

effect

1. dimmer mode : This menu allows you to adjust the dimming modes (off,block, medium, and slow dimming speeds) that do not work in the four modes
2. Fan Mode: Fan speed setting: can be set to automatically accelerate or decelerate according to LED temperature, or can be set to operate at high speed

ADVANCED advanced setting

Factory Reload
Mapping Rotation

INFORMATION
